AgentStack

AI Agent Backend-as-a-Service (BaaS)

Build and deploy intelligent AI agents in minutes.

Founder: Junaid Ahmed

Problem

Developers and businesses spend significant time building AI infrastructure such as memory systems, RAG pipelines, APIs, authentication, and deployment.

This increases development time and complexity.

Solution

AgentStack provides plug-and-play AI backend infrastructure that helps developers create and manage AI agents quickly.

Product Features

- AI Agent creation
- Long-term memory
- Knowledge base (PDF/RAG)
- API generation
- Tool integration
- Analytics dashboard
- Authentication

How It Works

Create Agent → Upload Knowledge → Connect Tools → Generate API → Deploy

Target Customers

- Startups
- Developers
- Software houses
- Universities
- Businesses

Revenue Model

Free Plan: Basic usage

Pro Plan: Monthly subscription

Enterprise: Custom pricing

API usage pricing

Competitive Advantage

Traditional platforms provide backend services.

AgentStack focuses on AI-native backend infrastructure with memory, knowledge systems, and intelligent agents.

Future Vision

Become the Firebase for AI agents.

Thank You

AgentStack
